NATURAL NUMBERS OR COUNTING NUMBERS

Natural numbers are the most common kinds of numbers we know. They are used in counting starting from 1 to infinity.

These numbers are divided into four— odd, even, composite, and prime numbers.

Odd Numbers: odd numbers are numbers that cannot be divided by two without remainder. Examples are 1, 3, 5, 7, 9, 11....

Even Numbers: even numbers are the direct opposite to odd numbers. They can be divided by two. They are 2, 4, 6, 8, 10, 12....

Prime Numbers: prime numbers are those numbers that can only be divided by 1 and themselves. Examples are 2, 3, 5, 7, 11, 13, 17, 19, 23, etc.

Composite Numbers: composite numbers are numbers that are not prime numbers i.e. numbers that can be divided by other numbers, not just 1 and themselves.
